

The Capscan Portfolio

Matchcode Data Capture

Matchcode Data Capture (DC) is a real-time data capture and address validation software. It offers users a customisable 'plug-and-go' user interface and accepts either a post-code or partial address (where the postcode is unknown) and returns the full validated address. In this way a complete address can be captured with the minimum number of key-strokes. Matchcode DC is also available for the leading CRM products including Microsoft Dynamics™ CRM, GoldMine, and Achiever CRM.

Matchcode Batch

Matchcode Batch is our flagship batch cleansing address management solution. It is an easy-to-use 'Wizard' driven application for bulk cleansing large volumes of address data against the Royal Mail Postcode Address File (PAF) or other data sets. It offers unrivalled speed and accuracy when cleaning address data and can typically produce match rates of 90% or more on a first run, and process over a million records per hour depending on the hardware platform.

Matchcode Webnet

Our best selling Matchcode program adapted for the Internet. Makes form filling faster and more accurate. Matchcode Webnet is specially developed for fast and effective integration into your website. Supports Java, CGI, Active-X, ISAPI .NET and WAP.

Matchcode Commercial

Matchcode linked to approximately 3.4 million Business names and addresses. Each record consists of company name and address, together with the relevant SIC code, unique reference number and telephone number (where available).

Matchcode Names

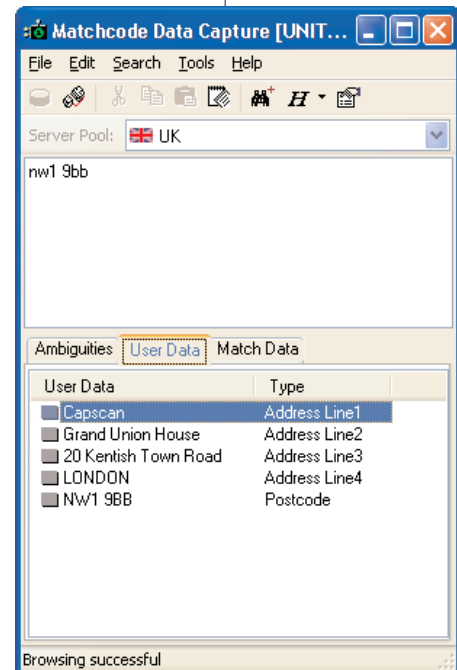

Matchcode linked to over 44 million names and their residential addresses based on National Canvase.

Matchcode Client/Server

Matchcode available as a Client/Server application. Matchcode Client/Server allows multiple users to simultaneously validate addresses on a single server.

Matchcode International

Matchcode International is the perfect tool for global addressing. Matchcode International provides addressing functionality for over 240 territories worldwide including the USA, Germany, France, Spain, Italy, Netherlands, Austria, Switzerland, Belgium, Luxembourg, Sweden and Portugal etc.

Matchcode DC offers users a customisable 'plug-and-go' user interface and accepts either a postcode or partial address.

The Capscan Portfolio

Zapcode

Specifically designed for real-time data capture applications, Zapcode will return an address from a postcode. It is available as a 'plug-and-go' product for Windows applications as well as in special format for leading CRM products including GoldMine, ACT!, Maximizer and Achiever CRM.

Zapcode Webnet

The web version of our popular real-time postcode to address data capture and validation software. Zapcode Webnet ensures your online customer databases are populated with only accurate, formatted information which is essential for effective customer relationship management and the efficient delivery of goods or services.

Sortcode

A Windows and Unix based program for use with the UK Mailsort and Presstream schemes for achieving bulk mailing discounts.

Software Developers Kit

Capscan's Software Developers Kit (SDK) provides developers with the ability to integrate Capscan's products into their own applications. It offers full manuals in both HTML and PDF formats plus sample code and useful examples to assist integration.

Nearcode

Capscan's 'nearest' look-up solution that provides a fast and accurate way to return the location of the nearest outlet to a specified address: The ideal solution for contact centres and store-finder websites.

MatchManager

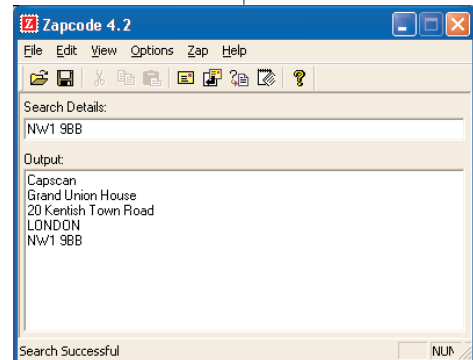

A powerful solution which interrogates database tables for duplicate records. You define the search criteria, from a comprehensive range of match operators including phonetic, direct word match, telephone/fax number and name initials.

Capscan Integrity

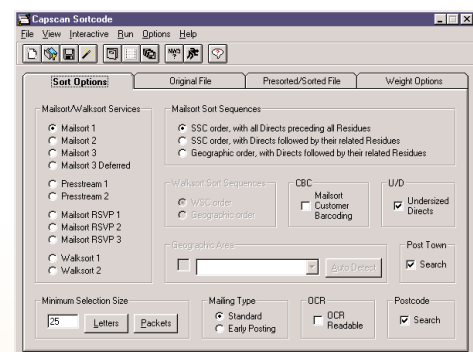

Our innovative 24/7 online data cleansing service, which offers users a simple but cost-effective way of cleaning, enhancing and suppressing data: A service tailored for organisations of all sizes, whether small or large.

Capscan OnDemand

Capscan's 'Pay-per-search' hosted address validation and data enhancement service. Not only does it validate and correct international addresses, but it can also enhance data by providing geo-codes, lifestyle and B2B information.

Zapcode is a rapid addressing solution specifically designed for online data capture that returns an address from a postcode.

Sortcode is a Windows and Unix based program for use with the UK Mailsort and Presstream schemes.
