

Matchcode For GoldMine

Matchcode is now available for seamless integration into GoldMine to ensure that your database is populated with accurate contact and address information. This new version of Matchcode is designed to work in conjunction with GoldMine contact database.

Through the Windows DDE (Dynamic Data Exchange), Matchcode is able to retrieve contact information from GoldMine, and to subsequently update the GoldMine database with a verified address and postcode. Verification is achieved by matching an address and/or postcode against the Royal Mail's Postcode Address File (PAF). Matchcode for GoldMine returns all the elements of an address including the organisation name from a partial address or postcode.

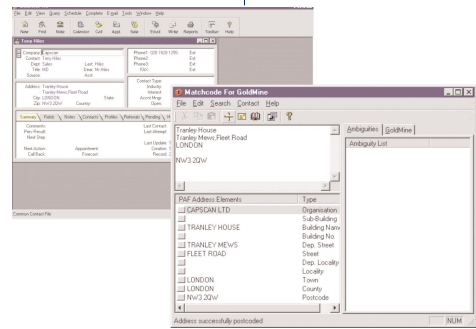

FEATURES AND BENEFITS

Matchcode For GoldMine:

- Contains a new, simplified and user-friendly Windows interface.
- Returns a full postal address from a partial address or postcode.
